The moral problems of abortion, infanticide, suicide, euthanasia, capital punishment, war and other life-or-death choices.

This is a true story about the "West Virginia Miracle Man" David Barrows. He was an alcoholic/drug user most of his life until he was severely injured by an ATV accident. In fact, he was pronounced dead three times by the time he arrived at the hospital. The doctors were able to revive him after the 5th try and told his family IF he made it through the night he would never walk or talk again, but he proved the doctors wrong. He now is a motivational speaker talking all over the country to schools and organizations about ATV Safety Awareness, alcohol and drug prevention and T.B.I. disabilities. Even though he miraculously survived he still suffers from permanent damage from the accident causing him to lose sight in his left eye, total reconstruction on the left side of his face, no feelings in left arm or left leg, plus he suffers from Traumatic Brain Injury (T.B.I.) and lives with severe pain in his back and chest daily. He is an advocate of the AA and NA programs and is writing his story in hopes of saving one more alcoholic/drug addict and saving lives through ATV safety awareness. His story is nothing short of a miracle and is an inspiration to all.

Withdrawing life-sustaining treatment: allowing to die or causing death? -- Active euthanasia -- Death and the brain -- Challenges to a circulatory-respiratory criterion for death -- Donation after circulatory determination of death -- Vital organ donation without the dead donor rule -- Legal fictions approach to organ donation.

Poging tot inventarisatie van de ethische problematiek, die kan ontstaan door medische ingrepen in de menselijke erfelijkheid en in de menselijke psyche.

Millions of Americans suffer from indifferent, outdated health care; an estimated 40,000 incidents of medical harm happen every day. The good news is that you can prevent this from happening to you or a family member. Better yet, you can find the very best care in the world. Patrick Malone's sensible advice and real-life anecdotes will inspire you to take charge of your own health care, make the best choices, and avoid serious harm. With the "'Necessary Nine'" - the essential steps to finding the best medical care - The Life You Save offers vital information such as: ; The single most important question

you can ask your doctor ; When to know you have symptoms your doctor should not shrug off ; Checklists to help you get out of the hospital in one piece ; Where to locate the best surgeons and safest hospitals.

An unborn baby with a fatal heart defect . . . a skier submerged for an hour in a frozen Norwegian lake . . . a comatose brain surgery patient whom doctors have declared a "vegetable." Twenty years ago all of them would have been given up for dead, with no realistic hope for survival. But today, thanks to incredible new medical advances, each of these individuals is alive and well . . . Cheating Death. In this riveting book, Dr. Sanjay Gupta-neurosurgeon, chief medical correspondent for CNN, and bestselling author-chronicles the almost unbelievable science that has made these seemingly miraculous recoveries possible. A bold new breed of doctors has achieved amazing rescues by refusing to accept that any life is irretrievably lost. Extended cardiac arrest, "brain death," not breathing for over an hour-all these conditions used to be considered inevitably fatal, but they no longer are. Today, revolutionary advances are blurring the traditional line between life and death in fascinating ways. Drawing on real-life stories and using his unprecedented access to the latest medical research, Dr. Gupta dramatically presents exciting accounts of how pioneering physicians and researchers are altering our understanding of how the human body functions when it comes to survival-and why more and more patients who once would have died are now alive. From experiments with therapeutic hypothermia to save comatose stroke or heart attack victims to lifesaving operations in utero to the study of animal hibernation to help wounded soldiers on far-off battlefields, these remarkable case histories transform and enrich all our assumptions about the true nature of death and life.

"This book comes at a time that could hardly be more important. Miller-Idriss opens up a completely new approach to understanding the processes of violent radicalization through subcultural products...(and) will surely become a standard work in the study of right-wing extremism."--Daniel Koehler, founder and director of the German Institute on Radicalization and De-Radicalization Studies.dies.

10 Good Questions about Life and Death makes us think again about some of the most important issues we ever have to face. Addresses the fundamental questions that many of us ask about life and death. Written in an engaging and straightforward style, ideal for those with no formal background in philosophy. Focuses on commonly pondered issues, such as: Is life sacred? Is it bad to die? Is there life after death? Does life have meaning? And which life is best? Encourages readers to think about and respond to the human condition. Features case studies, thought-experiments, and references to literature, film, music, religion and myth.
