Petrarch's revival of the ancient practice of laureation in 1341 led to the laurel being conferred on poets throughout Europe in the later Middle Ages and the Early Modern period. Within the Holy Roman Empire, Maximilian I conferred the title of Imperial Poet Laureate especially frequently, and later it was bestowed with unbridled liberality by Counts Palatine and university rectors too. This handbook identifies more than 1300 poets laureated within the Empire and adjacent territories between 1355 and 1804, giving (wherever possible) a sketch of their lives, a list of their published works, and a note of relevant scholarly literature. The introduction and various indexes provide a detailed account of a now largely forgotten but once significant literary-sociological phenomenon and illuminate literary networks in the Early Modern period.

This book provides obligatory study material on courses on autoimmune bullous diseases. Residents and researchers in dermatology and adjacent disciplines can use the book as a quick reference guide when dealing with these patients. The book contains protocols and follows international guidelines. Currently there is no quick primer on Autoimmune Bullous Diseases for dermatologists who wish to learn the subtleties of diagnosis and management of this group of mucocutaneous diseases. Since mucous membranes are also included the following medical disciplines might be interested too: oral medicine and stomatology, ENT, ophthalmology, gynaecology, gastro-enterology. The Center for Blistering Diseases in Groningen has organized since the year 2000 an annual course on Bullous Diseases for dermatologists and pathologists. The staff is selected from the faculty. The course is interactive and problem-oriented. The proposed book would represent the documented practical knowledge of the staff on these diseases. The information should be clear and practical with examples and questions for self-assessment.

This new text offers a unique developmental focus on gender. Gender development is examined from infancy through adolescence, integrating biological, socialization, and cognitive perspectives. The book's current empirical focus is complemented by a lively and readable style that includes anecdotes about children's everyday experiences. The book's accessibility is further enhanced with the use of bold face to highlight key terms when first introduced along with a complete glossary of these terms. All three of the authors are respected researchers in divergent areas of children's gender role development and each of them teaches a course on the topic. The book's primary focus is on gender role behaviors – how they develop and the roles biological and experiential factors play in their development. The first section of the text introduces the field and outlines its history. Part 2 focuses on the differences between the sexes, including the biology of sex and the latest research on behavioral sex differences, including motor and cognitive behaviors and personality and social behaviors. Contemporary theoretical perspectives on gender development – biological, social and environmental, and cognitive approaches – are explored in Part 3 along with the research supporting these models. The social agents of gender development, including children themselves, family, peers, the media, and schools are addressed in the final part. Cutting-edge and comprehensive, this is the perfect text for those who have been searching for an advanced undergraduate and/or graduate book for courses in gender development, the psychology of sex roles and/or gender and/or women or men, taught in departments of psychology, human development, and educational psychology. Although chapters have been designed to be read sequentially, a full author citation is included the first time a reference is used within an individual chapter rather than only the first time it is used in the book, making it easy to assign chapters in a variety of orders. This referencing system will also appeal to scholars interested in using the book as a resource to review a particular content area.

This book is a comprehensive compendium of current knowledge on inherited and autoimmune blistering diseases that relates advances in our understanding of the pathogenetic mechanisms to management of the individual diseases. The aim is to provide a detailed reference for dermatologists who care for patients with these conditions and a useful "one-stop information shop" for specialists outside of dermatology. The book opens by describing the structure and biology of the epidermis and basement membrane zone and discussing the genes and proteins that are targets for mutations and autoantibodies. The role of the various diagnostic tests is explained, and clinical manifestations of the specific diseases are presented with the aid of many high-quality illustrations. The forms of treatment appropriate in specific conditions are then described in depth, with coverage of dressings, drugs, surgical procedures, gene therapy, and other novel approaches. Helpful algorithms are included both for testing and monitoring and for treatment.
